

UPHOLSTERED FURNITURE

Furniture is no small investment. To help you navigate the many choices before you, here are some details to look for to separate the “clunkers” from the “keepers.” You’ll be happy to know Broyhill® delivers on every detail.

STURDY FRAME

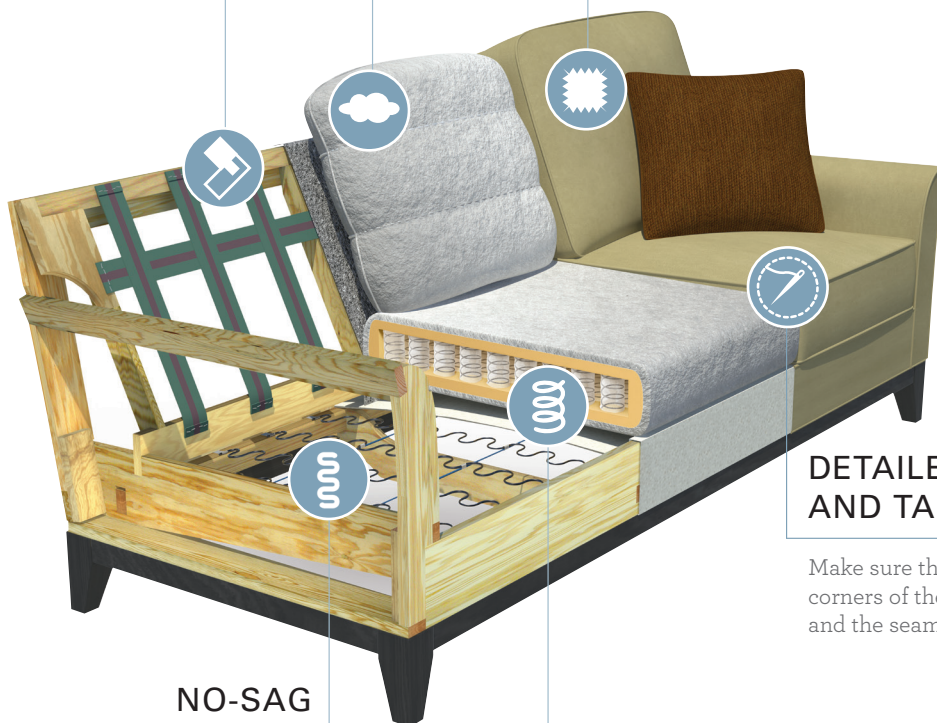

For maximum strength and durability, insist on an interlocking wood frame instead of nailed plywood.

COMFORTABLE BACK CUSHIONS

For long lasting comfort, make sure cushions have multiple compartments to keep the fiber evenly distributed and securely in place. Tight tailored backs should be constructed with a solid layer of foam topped with fiber.

DURABLE FABRIC

Check to see if the fabric meets or exceeds furniture industry standards.

**NO-SAG SPRINGS**

Ask if the springs are at least 8.5 gauge steel and if they are connected to solid hardwood rails. If they're attached to plywood, they might sag, warp or twist.

DETAILED FIT AND TAILORING

Make sure the fabric around the corners of the cushions are smooth and the seams are straight.

LONG LASTING SEAT CUSHIONS

Make sure cushions and tight tailored seats are comfortable, supportive and made of a material like soy-based foam. Cushions that incorporate coil technology, like Broyhill's DuraCoil™ shown above, are even longer lasting.*

SUSTAINABILITY PRACTICES

Choose furniture that uses environmentally-friendly products like SFI certified lumber, soy-based foam and recycled steel.

*Broyhill's DuraCoil™ technology can only be used in products with loose seat cushions.
